

# INDUSTRIAL CHEMISTRY

The Industrial Chemistry Division of Geotechnical Services provides two main services to clients: Testing and Consulting.

Testing includes the analysis and testing of liquid fuels and other materials as well as product control and specification testing. Testing is performed for small and large operators on either a casual or contract basis.

Consulting utilises the diverse laboratory facilities and expertise within the company to provide a problem-solving service to clients. This division has considerable experience in large multidisciplinary projects where chemical analyses and interpretation are necessary.

"THE DIVISION  
HAS CONSIDERABLE  
EXPERIENCE IN LARGE  
MULTIDISCIPLINARY  
PROJECTS"

## SERVICES

- Testing of All Types of Liquid Fuels and Crude Oils
- Analysis of a Wide Range of Inorganic and Organic Materials
- Material Failure Analysis
- Water Analysis
- Corrosion Product Analysis
- Metal Analysis
- Analysis of Deposits, Sludges and Residues
- Materials Testing for Insurance and Litigation
- Purposes
  - Specification Conformity Testing
  - Aviation and Military Fuel Testing
  - Fuel Shipment Quality Assurance
  - SEM-EDX, XRD analysis
